

Deep Learning for NLP - Focus on Medical Applications

Representation Learning and Convolutional Networks

1. What did we do wrong in the Tweets Classification Task

- Fully Connected Networks
 - Linear layers
- Word2Vec
 - Learns word representations
- Classifying words
- Sentence representations
 - Averaging is not the best solution
 - Significant information loss
 - Works when order of words is not important
 - Disease mention

2. Representation learning

- Language Modeling
- Words to sentences
- Images to vectors

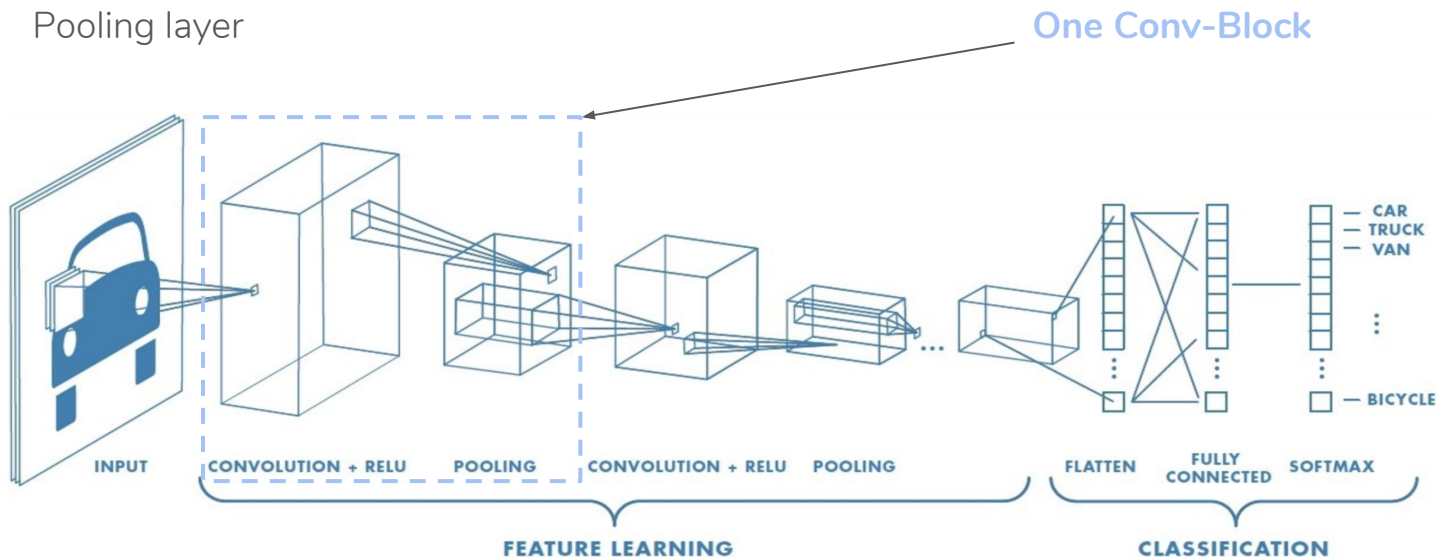

2. Representation Learning - Images

- The network has to learn everything
 - Background
 - Position
 - What is important what not
 - Colors/Shades

3. Convolutional Networks

- We need something a bit biased towards detecting features in images
 - Edges, Shapes, Parts
- One conv-block consists of:
 - Convolution + Activation = Conv Layer
 - Pooling layer

3. Convolutional Networks - filters/kernels

- We are learning the weights of the filters/kernels
- Detecting vertical edges (see colab on edge detection)

10	10	10	0	0	0
10	10	10	0	0	0
10	10	10	0	0	0
10	10	10	0	0	0
10	10	10	0	0	0
10	10	10	0	0	0

*

1	0	-1
1	0	-1
1	0	-1

=

0	30	30	0
0	30	30	0
0	30	30	0
0	30	30	0

3. Convolutional Networks - filters/kernels

1 _{x1}	1 _{x0}	1 _{x1}	0	0
0 _{x0}	1 _{x1}	1 _{x0}	1	0
0 _{x1}	0 _{x0}	1 _{x1}	1	1
0	0	1	1	0
0	1	1	0	0

ReLU
(Activation Function)

3. Convolutional Networks - filters/kernels

- We are learning the weights of the filters/kernels
- Detecting vertical edges

10	10	10	0	0	0
10	10	10	0	0	0
10	10	10	0	0	0
10	10	10	0	0	0
10	10	10	0	0	0
10	10	10	0	0	0

6 x 6

*

1	0	-1
1	0	-1
1	0	-1

3 x 3

=

0	30	30	0
0	30	30	0
0	30	30	0
0	30	30	0

4 x 4

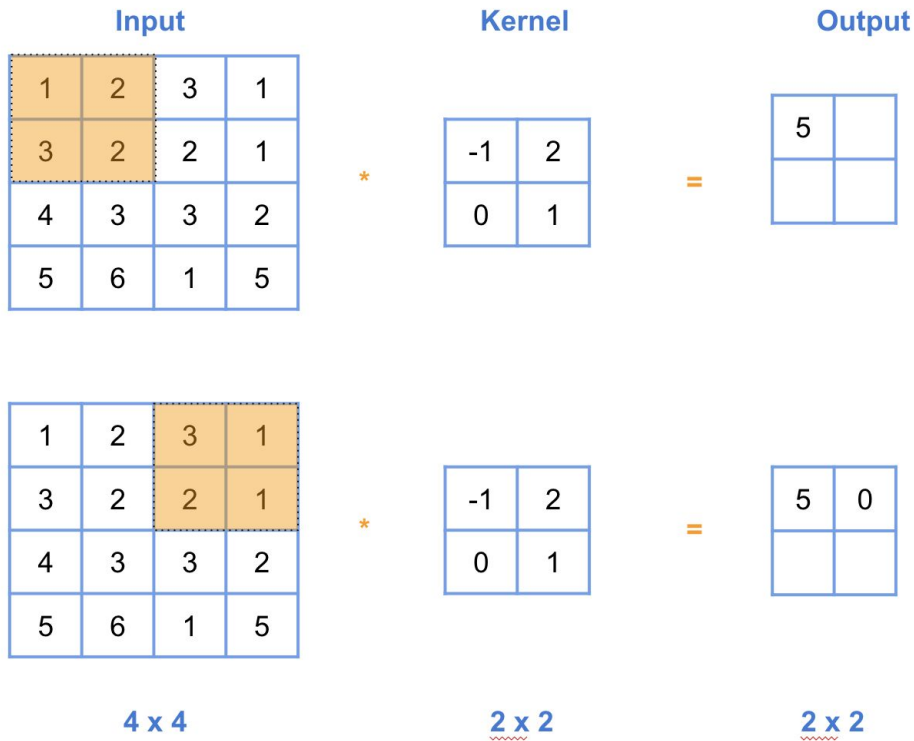

3. Convolutional Networks - filters/kernels

- **stride = 1**
- padding
- dilation

3. Convolutional Networks - filters/kernels

- **stride = 2**
- padding
- dilation

3. Convolutional Networks - filters/kernels

- stride
- **padding**
- dilation

Padding = 1

Input					
0	0	0	0	0	0
0	1	2	3	1	0
0	3	2	2	1	0
0	4	3	3	2	0
0	5	6	1	5	0
0	0	0	0	0	0

*

Kernel	
-1	2
0	1

=

Output			
1			

3. Convolutional Networks - filters/kernels

- stride (usually 1)
- padding (usually no padding)
- dilation (not easy to explain, but skipping pixels)

3. Convolutional Networks - filters/kernels

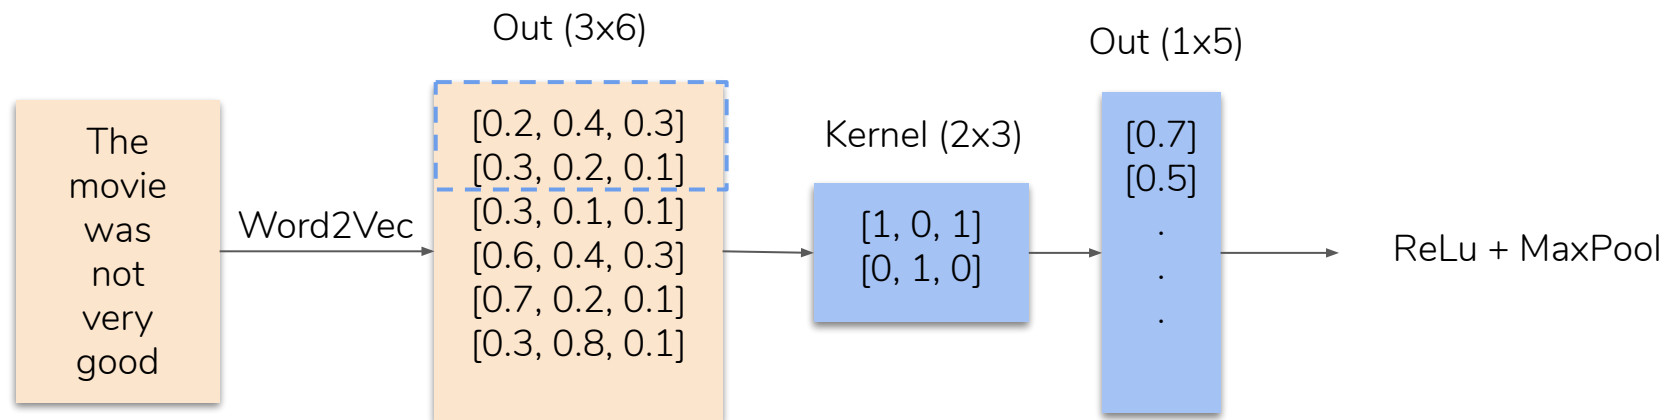

Convolution layer

3. Convolutional Networks - Max pooling

4. ConvNets applied to Text

4. ConvNets Interpretability - Class Activation Map

Airedale, Airedale terrier

miniature schnauzer

Boston bull, Boston terrier

standard poodle

English setter

4. ConvNets - Problems

- Not made for text classification
- Very good for finding short patterns
- No long dependencies, or sequential reading of text
- Loss of semantics

Summary

- What is Representation Learning
- How are fully connected networks used
- What did we do wrong
- Convolutional Networks (CNNs)
 - How do they work
 - Training a CNN
 - Advantages
 - Problems
 - Interpretability
